

## Xvision's Test Monitor launches successfully at IFSEC

The launch of Xvision's first Site Survey & Test Monitor (Model: XTM020) was celebrated at IFSEC '08, with over 100 units being given away as the top prize in a Prize Draw competition on the Y3K stand. "The Test Monitor proved to be a great attraction and drew lots of people to our stand" said John Campbell, Y3K Account Manager. "The competition was well promoted and the response was fantastic" he continued.

Xvision's XTM020 is the World's first Test Monitor with built in CCD camera and 5 lenses, which allows for demonstrating and selecting the right lens during a site survey.

4mm lens

6mm lens

8mm lens

12mm lens

16mm lens

This handy all-in-one unit is a 'must have' for CCTV installers and is equipped with a 0.5 lux, 1/3" CCD Camera and large 3.5" Colour Monitor which allows for:

- Choosing the best location & lens angle for cameras
- Positioning and basic focusing of cameras during a test installation
- Using the Test Monitor as a loophole device
- Using the Test Monitor as camera output for control equipment testing

The XTM020 can be powered by batteries or 12V DC from either an additional power supply, or by a camera using the lead supplied.

The key advantages to the installer are that the XTM020 will both save you time (and money) and make installation much simpler. "Your investment in the purchase of this unit will be repaid many times over", said Mr. Campbell.
